

## New dental sales company launched in the UK

Komet Dental, a global leader in dental innovation, has established a dedicated sales company designed to enhance customer service and provide tailored solutions for the UK market. This move builds on Komet's successful partnerships with dealers and reflects its unwavering commitment to meeting the unique needs of dental professionals.

The launch of Komet UK ensures localised support with direct customer contact, specialised advice, and exclusive, customised offers. Customers will benefit from faster access to new innovations, flexible delivery options, and services tailored to their individual requirements. This initiative enables Komet to work more closely with practitioners, offering high-quality tools and services that make dental and laboratory work more efficient, economical, and reliable.

Komet Dental's offerings are built on over a century of expertise and a strong global presence. With over 250,000 customers worldwide, the family-owned company remains a top innovator in the industry, providing products developed through in-house R&D and manufactured under strict quality standards in Germany. Komet's multi-channel approach, including a dental sales consultant team starting in January and the launch of a full web shop ([www.kometuk.com](http://www.kometuk.com)) by February 2025, ensures accessibility and convenience for all customers.

Komet UK reinforces its commitment to fostering strong relationships with its trusted dealer network. These valued partnerships enable Komet to deliver a comprehensive product portfolio backed by expert guidance and unparalleled support, ensuring the highest standards of service for dental professionals across the UK.

This milestone highlights Komet Dental's dedication to equipping dental professionals with the tools and support necessary to deliver outstanding patient care.

## Protecting the longevity and health of dental implants

Dental implants require rigorous maintenance to prevent complications like peri-implantitis, a condition that can lead to infection, bone loss, and implant failure. While daily brushing and flossing are crucial, incorporating regular Lumoral treatment provides an additional layer of protection for implant patients.

Lumoral is an innovative, drug-free home device that combines antibacterial dual-light therapy with a specialised Lumorinse mouthwash to target harmful plaque bacteria, reduce plaque buildup, and promote oral health. According to Dr Leif Björn, an implant specialist in Sweden, Lumoral offers superior protection for dental implants by providing deep cleaning that traditional oral hygiene methods may miss. Its light therapy penetrates biofilm layers, reaching areas around the gum line and implant surfaces that are difficult to access with brushing or flossing alone.

One of Lumoral's unique advantages is its ability to selectively target harmful bacteria without disrupting the beneficial oral microbiome. Unlike some mouthwashes that may cause irritation or dryness, Lumoral is gentle on oral tissues, making it suitable for regular use. This non-invasive treatment minimises the risk of infection while promoting healthier gums and bone tissue essential for implant stability.

It is recommended to use Lumoral 2–3 times per week as part of a comprehensive oral hygiene routine. By reducing bacterial buildup and inflammation, Lumoral helps prevent peri-implantitis and supports long-term implant success. Additionally, its prolonged antimicrobial effects surpass those of standard mouthwashes, offering lasting protection against complications.

For implant patients, integrating Lumoral into the daily routine alongside regular dental checkups adds an extra layer of defence, ensuring a cleaner oral environment and reducing the likelihood of invasive treatments. Lumoral's advanced technology also empowers patients to take proactive steps in maintaining their implants' health, function, and longevity.

## Control your impression compounds

When obtaining conventional physical impressions, accuracy is heavily impacted by the temperature control of your impression compounds. Choose the Dental Water Bath from Kemdent to optimise this workflow within your practice.

UK dental clinicians have designed, developed and tested the Dental Water Bath, because no-one knows the standard of excellence you require quite like another dental professional!

With digital temperature control and a fitted lid to maintain the ideal environment for your impression compounds, it's simple to prepare for brilliant conventional impressions. The Dental Water Bath is also fully autoclavable for optimal cross infection control, with a wipe-clean outer casing.

This is just one of the many exceptional conventional impression solutions offered by Kemdent, and you can contact the team today to learn more.

For more information about the leading solutions available from Kemdent, visit [www.kemdent.co.uk](http://www.kemdent.co.uk) or call 01793 770 256.
